tenable™

Crosskey

An IT innovator born from the banking industry, Crosskey Banking Solutions provides services that help banking customers in Finland and Sweden protect cardholder data, prevent data breaches and ensure the integrity of their operations. Tenable provided comprehensive solutions that enable Crosskey to gain better control of its environment and streamline and improve the effectiveness of its vulnerability management program.

Key Business Needs

Crosskey Banking Solutions develops, delivers and maintains systems and solutions for the Nordic banking and capital markets. The company needed to validate the effectiveness of its security practices through PCI compliance, and because it operates in both Finnish and Swedish markets, it had to comply with a variety of specific banking regulations for each country

Tenable Products Selected

Crosskey reduced risk and ensured compliance with PCI DSS requirements by implementing SecurityCenter, Nessus and Nessus Enterprise Cloud. SecurityCenter provides extensive reporting capabilities and addresses a variety of audit policy options, including customizable scripting. It also enabled Crosskey's successful transition from MSSP to internal control of vulnerability management.

Resulting Benefits

Tenable enabled Crosskey to gain better control of its environment and streamline and improve the effectiveness of its vulnerability management program, which is now more collaborative and integrated with the operations teams to enhance the enterprise's security. Tenable's solutions quickly identify vulnerabilities and compliance gaps across Crosskey's entire environment, including external-facing systems, and provide extensive reporting and analytics.
